I'm Giulia Fasiello and I'm a fashion designer.

I graduated from Naba Roma in 2023.

My education allowed me to rediscover a personal style and creativity. During my studies I had the opportunity to discover a lot of different types of design techniques and arts.

I also had the opportunity to collaborate with students of styling and media design, this allowed me to have a predisposition for group work expanding my communication and organization skills.

**CONTAMINATED  
COLLECTION**

**THESIS  
COLLECTION**  
2023

This experimental thesis aligns with an ecologist movement that challenges the traditional anthropocentric perspective, aiming for a peripheral view of reality.

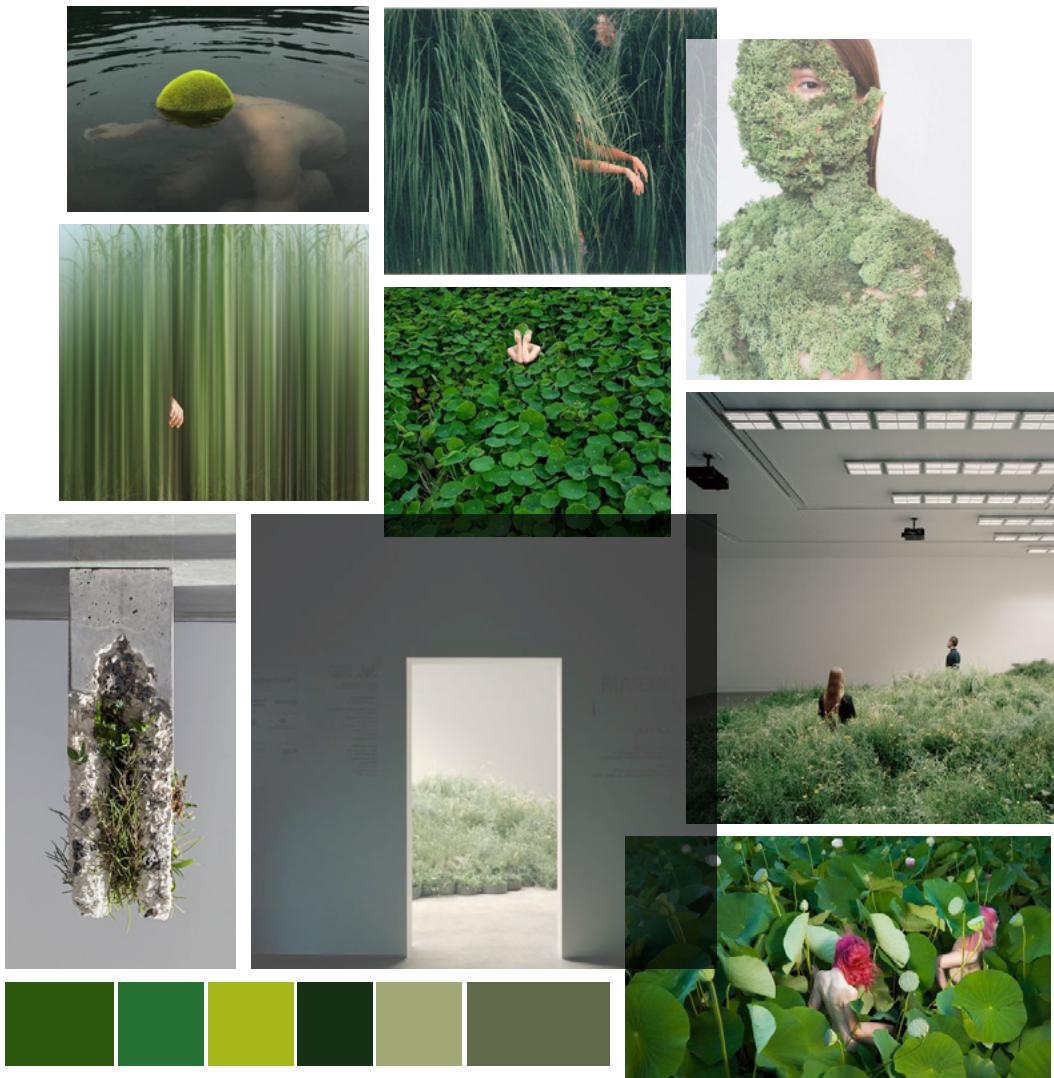

It seeks to eliminate distinctions between nature, animals, and humans, envisioning them as integral parts of a unified ecosystem. The thesis focuses on adapting this philosophy to fashion, particularly textile design, to recreate the concept of an ecosystem on fabrics. The research involves placing untreated natural fiber fabrics in city and countryside environments, exploring the impact of climate and external factors. The fabrics are subdivided, some affixed above ground and others buried in soil, leading to the gradual development of an ecosystem evidenced by tearing, color changes, and shape alterations. After a nine-month observation, the fabrics are removed, revealing diverse transformations based on their locations, ultimately converging into an ecosystem comprising microorganisms, nature, and human intervention.

the project includes: research and theme development,  
illustrations skills, pattermaking and prototyping skills,  
textile research.

illustrator

**MOODBOARD**

images collection

Visual image research, to accurately convey the concepts and sensations that I intend to incorporate into the development process of my collection and designs. This approach ensures that each piece is not just a design example, but rather a profound visual translation of the ideas and feelings underlying my creative vision. This targeted research provides conceptual coherence to my production, ensuring that the project and consequently the collection can be faithfully translated according to my initial moodboard concept.

**TEXTILE PROCESS**

Some images depicting the development process of the ecosystem on the fabrics used. A selection of photos showcasing the impact of nature and external elements on these textiles.

**FABRICS AND COLORS**

final fabrics and color palette

**CREATIVE PROCESS**

collection development

The result of fabrics showcased in different contexts and positions, later employed in crafting the collection, with the addition of two external fabrics to create the structure. Color selection palette with CMYK codes to ensure accurate and faithful reproduction of the desired tones in my creative project.

This creative process involving the collection of sketches unified by a play of volumes. The most significant drawings that later enabled me to develop the four final looks.

**SPORTMAX PATTERN  
PROPOSAL**

**ACADEMIC PROJECT  
DIGITAL PRINTING**

2022

illustrator

selected works

The purpose of this project was to create creative prints to enhance an existing fashion collection.

I selected the Sportmax capsule collection, for which I recreated four distinct print patterns. The inspiration for these patterns comes from the descriptions/drawings found on FP2 masks that were used during the COVID-19 pandemic in 2020.

the project includes: research and theme development,  
illustrations skills, digital printing and  
textile research.

**POST HUMAN  
COLLECTION**

**FINAL  
COLLECTION**  
2022-2023

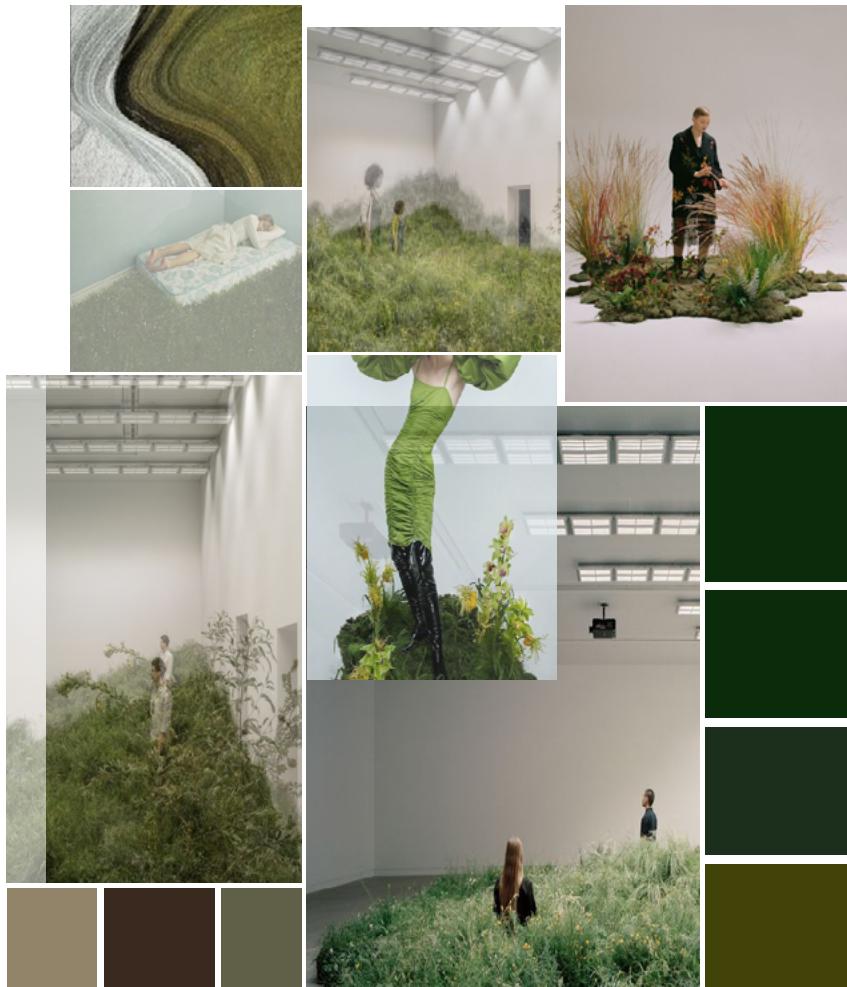

This project arises from the desire to merge man and nature into a single concept, recreating this idea through forms, textures, and contrasts between fabrics. The concept of this project is "the periphery vision" which does not de-emphasize. On the contrary, it pushes for understanding and shape-shifting; from the edge where the "anthropo-decentered" humanity has become aware of existing. The posthuman is a process of redefining our sense of connection with the common world and the environment. Live in the post human way of thinking, building "ecological relationships" must be described in terms of symbiosis a sort of fragile, contingent, uneasy ecological-relationship in which it is impossible to determine which entity is the top one.

the collection project includes research and theme development, illustrations skills, modeling/pattern-making and prototyping skills.

**KINDNESS  
COLLECTION**

**MENSWEAR-ACC ESSORY  
COLLECTION**  
2022-2023

This project encompasses a men's outfit consisting of three pieces, two entirely new and one of the three created using the upcycling technique, meaning, fashioning new garments from old ones. In this case, I chose to craft a tank top. Utilizing leftover fabrics from a shirt and pants, I created a kind of new textile by interlocking fabric pieces between two layers of tulle. Two micro leather bags, one crossbody and one handheld, were added to complete the look.

the collection project includes research and theme development, illustrations skills, modeling/pattern-making and prototyping skills.
